

e-services Overview

During the second half of 2005 Maltacourt migrated to a new Freight Management System (FMS) pulling all of Maltacourt's services, in our UK and Canada offices under the control of one system.

All aspects of our business are now managed within this single application, including Import/Export Operations, Domestic Services, Commercial Services, Warehousing, Distribution, Pick and Pack, Courier Services, Job Costing and Invoicing.

This new system not only allows us to better manage the many varied and diverse types of jobs that we transact, but also offers us greater flexibility in terms of providing electronic links and updates to our customers, suppliers and partners.

Below is an overview of the many methods by which Maltacourt can provide customer updates and reports or indeed a two way interface into our system.

We are also currently developing a Customer Portal, accessible from our website that will allow our customers direct access to a range of functions, such as:

- ✚ View your stock list
- ✚ Create a picking list
- ✚ View open/completed jobs
- ✚ Request a quote
- ✚ View agreed rates / rate calculator
- ✚ View/print an invoice
